

# From Engineering to Implementation

## TECHNICAL EXPERTS

### Engineering

C3F Telecom is your leading partner in telecommunication networks. It all begins with project management – design, surveys and load calculations, computerized drawings, permits and rights-of-way and site supervision – you can rely on our expert teams.

#### Engineering by Tenants

C3F Telecom is accredited to complete the calculations and forms involved in conducting engineering by the tenant for those who rent space over Hydro-Quebec infrastructures.

## KNOW HOW

### Construction

You can count on C3F Telecom for building your telecommunication networks. We will also proceed with the installation, fusion and tests required to ensure you get a complete and professional infrastructure. C3F Telecom operates in various environments: indoors, urban, rural and even in remote areas.

#### Private Networks

C3F Telecom also builds private networks for companies and institutions requiring total control over their communications or needing redundancy/diversity over their existing network.

## 24/7 EMERGENCY

### Maintenance

Preventive maintenance, answers to your requests and failure repairs – C3F Telecom offers a complete set of maintenance services. In case of an emergency, a human operator acknowledges your request at our call center and communicates it to an experienced technician who will contact you in less than an hour – 24/7.

#### Mobile Operation Centres (MOCs)

MOCs offer a local deployment of experienced teams available near your operation sites. MOCs supply expertise in engineering, construction and maintenance.
